

TECHNICAL DATA SHEET

ElectroCast™ 370 is a mullite based, low moisture castable designed to be installed by vibration casting.

- Based on Reno’s proprietary Electro Chemical bond system featuring an electrolyte for maximum performance.
• Rapid dry out capability while still retaining very low porosity.
• Micro porosity of bond phase has greatly reduced reactivity to corrosive vapors in the process.
• High hot strength and abrasion resistance.
• Low porosity and permeability for reduced penetration and reaction with molten metals, slags, and vapors.
• Recommended for molten iron transport vessels such as ladles, spouts, covers, etc. where low to moderate slag is present.
